1 Services

This section documents the core services running in the homelab environment. Each service is containerized using Docker and connected through a shared internal network to enable secure and controlled communication between components.

Each service is described with its role, configuration notes, and how it interacts with other services in the system.

1.1 Networking and Core Infrastructure

1.1.1 Adguard Home

1.1.2 WireGuard

1.1.3 Nginx

1.2 Media Platforms

1.2.1 Jellyfin

1.2.2 kavita

1.2.3 Audiobookshelf

1.3 Automation Tools

1.3.1 Youtube Music Downloader

1.3.2 Manga Downloader

1.3.3 Developer Tools

2 TODO

In this section I describe future additions or modifications to the homelab server.
